BARO'METER, bå-róm'-mê-tůr. *n. ſ.* [from βάρος weight, and μέτρον meaſure.] A machine for meaſuring the weight of the atmoſphere, and the variations in it, in order chiefly to determine the changes of the weather. It differs from the baroſcope, which only ſhews that the air is heavier at one time than another, without ſpecifying the difference. The *barometer* is founded upon the Torricellian experiment, ſo called from Torricelli, the inventor of it, at Florence, in 1643. It is a glaſs tube filled with mercury, horizontally ſealed at one end; the other open, and immerged in a baſin of ſtagnant mercury: ſo that, as the weight of the atmoſphere diminiſhes, the mercury in the tube will deſcend, and, as it increaſes, the mercury will aſcend; the column of mercury ſuſpended in the tube being always equal to the weight of the incumbent atmoſphere.

The meaſuring the heights of mountains, and finding the elevation of places above the level of the ſea, hath been much promoted by barometrical experiments, founded upon that eſſential property of the air, its gravity or preſſure. As the column of mercury in the *barometer* is counterpoiſed by a column of air of equal weight, ſo whatever cauſes make the air heavier or lighter, the preſſure of it will be thereby increaſed or leſſened, and of conſequence the mercury will riſe or fall. *Harris.*

Gravity is another property of air, whereby it counterpoiſes a column of mercury from twenty-ſeven inches and one-half to thirty and one-half, the gravity of the atmoſphere varying one-tenth, which are its utmoſt limits; ſo that the exact ſpecifick gravity of the air can be determined when the *barometer* ſtands at thirty inches, with a moderate heat of the weather. *Arbuthnot on Air.*

BA'RON, bår'-rûn. *n. ſ.* [The etymology of this word is very uncertain. *Baro*, among the Romans, ſignified a brave warriour, or a brutal man; and, from the firſt of theſe ſignifications, *Menage* derives *baron*, as a term of military dignity. Others ſuppoſe it originally to ſignify only a man, in which ſenſe *baron*, or *varon*, is ſtill uſed by the Spaniards; and, to confirm this conjecture, our law yet uſes *baron* and *femme*, huſband and wife. Others deduce it from *ber*, an old Gauliſh word, ſignifying commander; others from the Hebrew נבר, of the ſame import. Some think it a contraction of *par homme*, or *peer*, which ſeems leaſt probable.]

1. A degree of nobility next to a viſcount. It may be probably thought, that anciently, in England, all thoſe were called *barons*, that had ſuch ſigniories as we now call *court barons*: and it is ſaid, that, after the Conqueſt, all ſuch came to the parliament, and ſat as nobles in the upper houſe. But when, by experience, it appeared that the parliament was too much crowded with ſuch multitudes, it became a cuſtom, that none ſhould come but ſuch as the king, for their extraordinary wiſdom or quality, thought good to call by writ; which writ ran *hac vice tantum.* After that, men ſeeing that this ſtate of nobility was but caſual, and depending merely on the prince's pleaſure, obtained of the king letters patent of this dignity to them and their heirs male; and theſe were called *barons* by letters patent, or by creation, whoſe poſterity are now thoſe *barons* that are called lords of the parliament; of which kind the king may create more at his pleaſure. It is nevertheleſs thought, that there are yet *barons* by writ, as well as *barons* by letters patent, and that they may be diſcerned by their titles; the *barons* by writ being thoſe that, to the title of lord, have their own ſurnames annexed; whereas the *barons* by letters patent are named by their baronies. Theſe *barons*, which were firſt by writ, may now juſtly alſo be called *barons* by preſcription; for that they have continued *barons*, in themſelves and their anceſtors, beyond the memory of man. There are alſo *barons* by tenure, as the biſhops of the land, who, by virtue of baronies annexed to their biſhopricks, have always had place in the upper houſe of parliament, and are called lords ſpiritual.

2. *Baron* is an officer, as *barons* of the exchequer to the king: of theſe the principal is called lord chief *baron*, and the three others are his aſſiſtants, between the king and his ſubjects, in cauſes of juſtice belonging to the exchequer.

King Edward III. being bearded and croſſed by the clergy, was adviſed to direct out his writs to certain gentlemen of the beſt abilities, entitling them therein barons in the next parliament. By which means he had ſo many barons in his parliament, as were able to weigh down the clergy;

It is evergreen; the leaves are much narrower than thoſe of the pine tree, and many of them produced out of one tubercle, reſembling a painter's pencil; it hath male flowers, or katkins, produced at remote diſtances from the fruit on the ſame tree. The ſeeds are produced in large cones, ſquamoſe and turbinated. The extenſion of the branches is very regular in *cedar* trees; the ends of the ſhoots declining, and thereby ſhewing their upper ſurface, which is conſtantly cloathed with green leaves, ſo regularly, as to appear at a diſtance like a green carpet, and, in waving about, make an agreeable proſpect. It is ſurpriſing that this tree has not been more cultivated in England; for it would be a great ornament to barren bleak mountains, even in Scotland, where few other trees would grow; it being a native of Mount Libanus, where the ſnow continues moſt part of the year. Maundrel, in his Travels, ſays, he meaſured one of the largeſt *cedars* on Mount Libanus, and found it to be twelve yards ſix inches in circumference, and ſound. At about five or ſix yards from the ground, it was divided into five limbs, each of which was equal to a great tree. The wood of this famous tree is accounted proof againſt the putrefaction of animal bodies. The ſaw-duſt is thought to be one of the ſecrets uſed by the mountebanks, who pretend to have the embalming myſtery. This wood is alſo ſaid to yield an oil, which is famous for preſerving books and writings; and the wood is thought by Bacon to continue above a thouſand years ſound. *Miller.*

Thus yields the *cedar* to the axe's edge,

CHAME'LEON, kå-mė'-lyůn. *n. ſ.* [χαμαιλέων.]

The *chameleon* has four feet, and on each foot three claws. Its tail is long; with this, as well as with its feet, it faſtens itſelf to the branches of trees. Its tail is flat, its noſe long, ending in an obtuſe point; its back is ſharp, its ſkin plaited, and jagged like a ſaw from the neck to the laſt joint of the tail, and upon its head it has ſomething like a comb; like a fiſh, it has no neck. Some have aſſerted, that it lives only upon air; but it has been obſerved to feed on flies, catched with its tongue, which is about ten inches long, and three thick; made of white fleſh, round, but flat at the end; or hollow and open, reſembling an elephant's trunk. It alſo ſhrinks, and grows longer. This animal is ſaid to aſſume the colour of thoſe things to which it is applied; but our modern obſervers aſſure us, that its natural colour, when at reſt and in the ſhade, is a bluiſh grey; though ſome are yellow, and others green, but both of a ſmaller kind. When it is expoſed to the ſun, the grey changes into a darker grey, inclining to a dun colour; and its parts, which have leaſt of the light upon them, are changed into ſpots of different colours. The grain of its ſkin, when the light doth not ſhine upon it, is like cloth mixed with many colours. Sometimes, when it is handled, it ſeems ſpeckled with dark ſpots, inclining to green. If it be put upon a black hat, it appears to be of a violet colour: and ſometimes, if it be wrapped up in linen, it is white; but it changes colour only in ſome parts of the body. *Calmet.*

A *chameleon* is a creature about the bigneſs of an ordinary lizard; his head unproportionably big, and his eyes great; he moveth his head without writhing of his neck, which is inflexible, as a hog doth; his back crooked, his ſkin ſpotted with little tumours, leſs eminent nearer the belly; his tail ſlender and long; on each foot he hath five fingers, three on the outſide, and two on the inſide; his tongue of a marvellous length in reſpect of his body, and hollow at the end, which he will launch out to prey upon flies; of colour green, and of a duſky yellow, brighter and whiter towards the belly; yet ſpotted with blue, white, and red. *Bacon's Nat. Hiſt.*

I can add colours ev'n to the *chameleon*;
Change ſhapes with Proteus, for advantage. *Shak.*

One part devours the other, and leaves not ſo much as a mouthful of that popular air, which the *chameleons* gaſp after. *Decay of Piety.*

The thin *chameleon*, fed with air, receives
The colour of the thing to which he cleaves. *Dryd.*

As the *chameleon*, which is known
To have no colours of his own,
But borrows from his neighbour's hue
His white or black, his green or blue. *Prior.*

CO'MET, kôm'-ĭt. *n. ſ.* [*cometa*, Lat. a hairy ſtar.]

A heavenly body in the planetary region, appearing ſuddenly, and again diſappearing; and, during the time of its appearance, moving through its proper orbit like a planet. The orbits of *comets* are ellipſes, having one of their foci in the centre of the ſun; and being very long and eccentrick, they become inviſible when in that part moſt remote from the ſun. *Comets*, popularly called blazing ſtars, are diſtinguiſhed from other ſtars by a long train or tail of light, always oppoſite to the ſun: hence ariſes a popular diviſion of *comets* into three kinds, *bearded*, *tailed*, and *haired comets*; though the diviſion rather relates to the different circumſtances of the ſame *comet*, than to the phænomena of the ſeveral. Thus, when the *comet* is eaſtward of the ſun, and moves from it, the *comet* is ſaid to be bearded, *barbatus*, becauſe the light marches before it. When the light is weſtward of the ſun, the *comet* is ſaid to be tailed, becauſe the train follows it. When the *comet* and the ſun are diametrically oppoſite, the earth being between them, the train is hid behind the body of the *comet*, excepting a little that appears around it, in form of a border of hair, hence called *crinitus*.

According to Sir Iſaac Newton, the tail of a *comet* is a very thin vapour, emitted by the head or nucleus of the *comet*, ignited by the neighbourhood to the ſun; and this vapour is furniſhed by the atmoſphere of the *comet*. The vapours of *comets* being thus dilated, rarefied, and diffuſed, may probably, by means of their own gravity, be attracted down to the planets, and become intermingled with their atmoſpheres. For the conſervation of the water and moiſture of the planets, *comets* ſeem abſolutely requiſite; from whoſe condenſed vapours and exhalations all that moiſture which is ſpent in vegetations and putrefactions, and turned into dry earth, may be reſupplied and recruited; for all vegetables increaſe wholly from fluids, and turn, by putrefaction, into earth. Hence the quantity of dry earth muſt continually increaſe, and the moiſture of the globe decreaſe, and at laſt be quite evaporated, if it have not a continual ſupply. And I ſuſpect, adds Sir Iſaac, that the ſpirit which makes the fineſt, ſubtileſt, and beſt part of our air, and which is abſolutely requiſite for the life and being of all things, comes principally from the *comets*.

The ſame great author has computed that the ſun's heat, in the *comet* of 1680, was, to his heat with us at Midſummer, as twenty-eight thouſand to one; and that the heat of the body of the *comet* was near two thouſand times as great as that of red-hot iron. He alſo calculates, that a globe of red-hot iron, of the dimenſions of our earth, would ſcarce be cool in fifty thouſand years. If then the *comet* be ſuppoſed to cool a hundred times as faſt as red-hot iron, yet, ſince its heat was two thouſand times greater, ſuppoſing it of the bigneſs of the earth, it would not be cool in a million of years. *Trevoux. Chambers.*
